NEW CLAIMS	OLD CLAIMS
	not the biological material.
14. The method of claim 13, wherein the biological material is selected from a group consisting of a protein, a peptide, an oligonucleotide, an oligosaccharide, a microsome, a cell, a tissue, an enzyme, a receptor, DNA and RNA.	2. The method of claim 1, wherein the biological material is selected from a group consisting of a protein, a peptide, an oligonucleotide, an oligosaccharide, a microsome, a cell, a tissue, an enzyme, a receptor, DNA and RNA.
15. The method of claim 13, wherein the compound or mixture of compounds is selected from the group consisting of a natural product, a combinatorial library, a drug, a drug mixture, a xenobiotic compound, a mixture of xenobiotic compounds, an endogenous compound, a mixture of natural products, and a mixture of endogenous compounds.	3. The method of claim 1, wherein the compound is selected from the group consisting of a natural product, a combinatorial library, a drug, a drug mixture, a xenobiotic compound, a mixture of xenobiotic compounds, an endogenous compound, and a mixture of endogenous compounds.
16. The method of claim 13, wherein the supportive solution is selected from a group consisting of a buffer, a nutrient medium, or a combination thereof, said supportive solution maintaining the biological material in a state wherein the biological material reacts with a compound or mixture of compounds in the sample.	4. The method of claim 1, wherein the supportive solution is selected from a group consisting of a buffer, a nutrient medium, or a combination thereof, said supportive solution maintaining the biological material in a state wherein the biological material interacts with a compound in the sample.
17. The method of claim 16, wherein the supportive solution facilitates the reactions of the biological material with the first solution and facilitates the removal of compounds, or mixture of compounds and products of the reactions between the compound or mixture of compounds and the biological material, by washing them through the ultrafiltration chamber into the second solution.	5. The method of claim 1, wherein the continuous flow facilitates the reacting of the biological material with the sample in the first solution or suspension and facilitates the removal of compounds from the sample by washing them through the ultrafiltration chamber into the second solution.
18. The method of claim 13, wherein the compound or mixture of compounds is added by means of injection.	7. The method of claim 1, wherein the sample is added to the continuous flow by means of injection.
19. The method of claim 13, wherein the suitable conditions for reactions between the biological material in the first solution with the compound or mixture of compounds, comprises mixing the sample with the biological material to achieve a homogeneous distribution of sample, controlling temperature to maintain function of	8. The method of claim 1, wherein the suitable conditions for reacting of the biological material in the first solution with the compound in the sample comprises mixing the sample with the biological material to achieve a homogeneous distribution of sample, temperature control to maintain function of the

NEW CLAIMS	OLD CLAIMS
the biological material, providing adequate concentration of sample and sufficient amount of biological material to facilitate analysis, providing sufficient time for interaction, and controlling atmospheric gases to maintain function of the biological material.	biological material, adequate concentration of sample and sufficient amount of biological material to facilitate analysis, sufficient time for interaction, and control of atmospheric gases (oxygen and carbon dioxide) to maintain function of the biological material.
20. The method of claim 13 is a high throughput method.	
21. The method of claim 13, wherein the analyzing of the second solution is by mass spectrometry.	10. The method of claim 1, wherein the analyzing of the second solution is by mass spectrometry.
22. The method of claim 13, wherein the products of the reactions comprise metabolites, glutathione adducts, and small molecules to determine cellular absorption.	
23. The method of claim 13, wherein multiple chambers with ultrafiltration membranes are arranged in parallel with a single mass spectrometer for step d.	12. The method of claim 1, wherein multiple chambers with ultrafiltration membranes are arranged in parallel with a single mass spectrometer for steps e and f.
24. A kit for analyzing a compound or mixture of compounds to determine if a compound or any of the mixture of compounds are suitable for use as a drug or natural product, by analyzing reaction products between biological material and the compound or mixture of compounds, said kit comprising in separate containers, (a) an ultrafiltration membrane with pore sizes that allow passage of the compound or mixture of compounds and reaction products, but not passage of the biological material, (b) a first solution containing the biological material, and (c) standards against which to compare analysis of the products of reactions between the first solution and the compounds or mixture of compounds to determine suitability as a drug or natural product.	11. A kit for analyzing a compound in a sample, to determine whether the compound has predetermined characteristics that would make it suitable for a specific purpose, said purpose comprising drug development and screening for metabolic parameters, said kit comprising in separate containers, an ultrafiltration membrane, a first solution containing a biological material, a buffer, a test solution, and a set of standard solutions with predetermined characteristics wherein the predetermined characteristics consist of functioning as a substrate for an enzyme, showing desirable rates of enzymatic catalysis, and showing desirable rates of cell permeability or transport, showing enzymatic activation to reactive or toxic metabolites.

Atty Docket No. 21726/90386

Page	Line	Comments
	8-1	drug development and screening for metabolic parameters, bioactivation and potential toxicity
2	11-14	"The method is a novel, high-throughput, on-line analysis of compounds added to a continuous flow system through biological materials in solution-that interact with the compounds. 'High-throughput' is defined herein to be of the order of 1 metabolite (compound) processed per minute or more."
2-3		definition of <ul style="list-style-type: none">-supportive solution-continuous flow-predetermined characteristics-suitable conditions- kit
4	FIG. 1A	"on line screening for metabolism and toxicity or bioavailability of a compound"
	FIG. 2	"screen xenobiotic compounds for products of drug metabolism"
6	6-16	summary of invention
6	17-34	summary of invention
8	7-8	"generating metabolites, extracting them from the biological material, and then analyzing them."
		reactive metabolites, toxic screens
8	20-33	live cells for absorption studies (bioavailability)
9	1-2	"one compound or one mixture of compounds
12	33-34	"investigate complex metabolism pathways or to investigate bioavailability"
14	33-34	metabolites used to study
15	1-3	metabolites used to study

III. Summary and Conclusion

New claims are provided which should not require additional searches, because the new language is a variation of the old. However, the new claims are formatted to have consistent terminology. Therefore, the new claims should not be subject to the 35 U.S.C. first and second paragraph rejections.

Serial No. 09/417,523

-9-

Atty Docket No. 21726/90386

Also, as discussed during the interview, the 102 and 103 rejections based on Venton should be removed because Venton addressed drug discovery based on analysis of bound vs. unbound drug candidates which passed through a membrane. In the present invention, drug development issues such as drug metabolism, toxicity and bioavailability are addressed instead of drug discovery. In the present invention, the first solution remains on one side of the membrane, reactions occur that do not bring the biological material across the membrane, and products such as drug metabolites or glutathione adducts of reactive drug metabolites cross the membrane into the second solution.

Applicant request allowance of new claims 13-24.

Please contact applicants' representative if you have any questions.

No other fees are believed due at this time, however, please charge any deficiencies or credit any overpayments to deposit account number 10-0435 with reference to our attorney docket number (21419/90368).

Respectfully submitted,

Alice O. Martin
